

Dear Parents,

I write today with a short update, as Monday we will be emailing home our school reopening guidelines. Those guidelines will detail our procedures for reopening on-campus education, as well as our plans regarding distance learning should it be required. Please keep an eye open Monday for those guidelines; if you haven't seen them in your email by Monday evening, check your spam folder!

On campus, we will soon be installing Global Plasma Solutions Needlepoint Bipolar Ionization air purification systems in our HVAC systems, and upgrading our air handling filters to the MERV-13 standard. As research has increasingly pointed to possible airborne virus transmission, it has become clear that mitigating this risk will help us protect the health and safety of our students and employees. This is one of many investments that the school has undertaken in order to make Community School as safe as possible for all, and even when the current crisis is past they will continue to provide cleaner and healthier environments for teaching and learning.

As always, please let me know if you have any questions.

Have a wonderful weekend,

A handwritten signature in black ink that reads 'Bob'.

Bob Cooke | Head of School
